

# How to buy a Trading Robot, a Magazine or a Book in MetaTrader Market?

Note this is modified version of the original document taken from [www.MQL5.com](http://www.MQL5.com).

You can buy any product (robots, indicators, magazines and books) in MetaTrader Market only through the [MetaTrader 4](#) and [MetaTrader 5](#) trading platforms. The list of products with their description is given on the MQL5.com website. After you press the "Buy" button, your client terminal will be launched.

## How to start

Find the Market tab in the platform. You can find it in the Toolbox window in MetaTrader 5, and in the Terminal window in MetaTrader 4. So first thing you will need to do is to open your MetaTrader terminal from your PC or laptop.

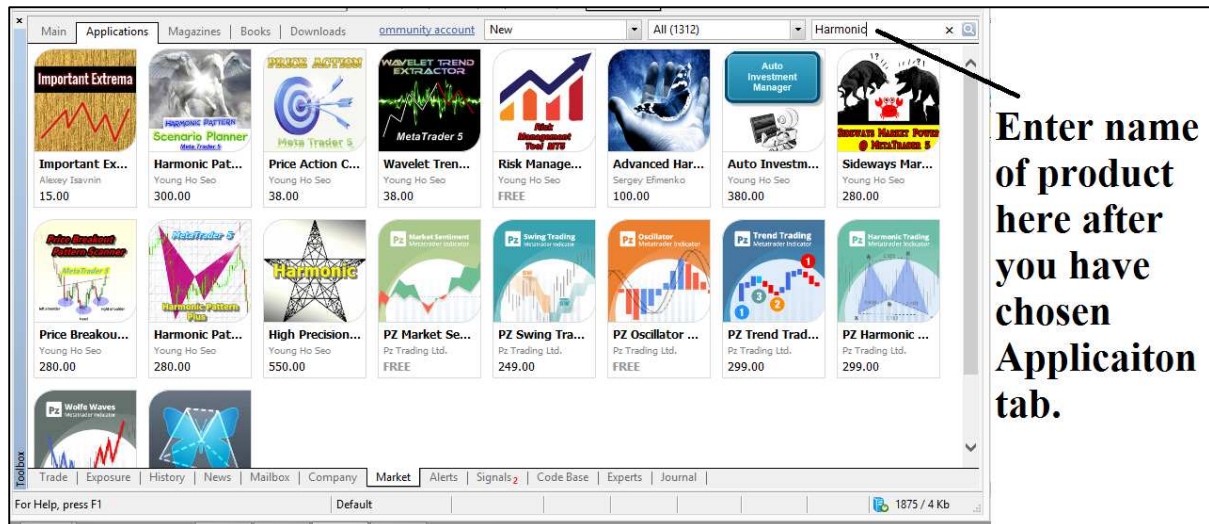

Here you can find the list of the products by categories: applications, magazines and books.

If you choose Applications tab, you will see all the products of the given category. There are also subcategories. Applications are divided into: Expert Advisors, indicators, toolbars, libraries, analyzers and utilities. If you are looking for applications of one particular type, you will find subcategories very useful. The best way of finding the product you are looking for is to enter the product name on the search box located on top left corner of the Market toolbox (See screenshot below).

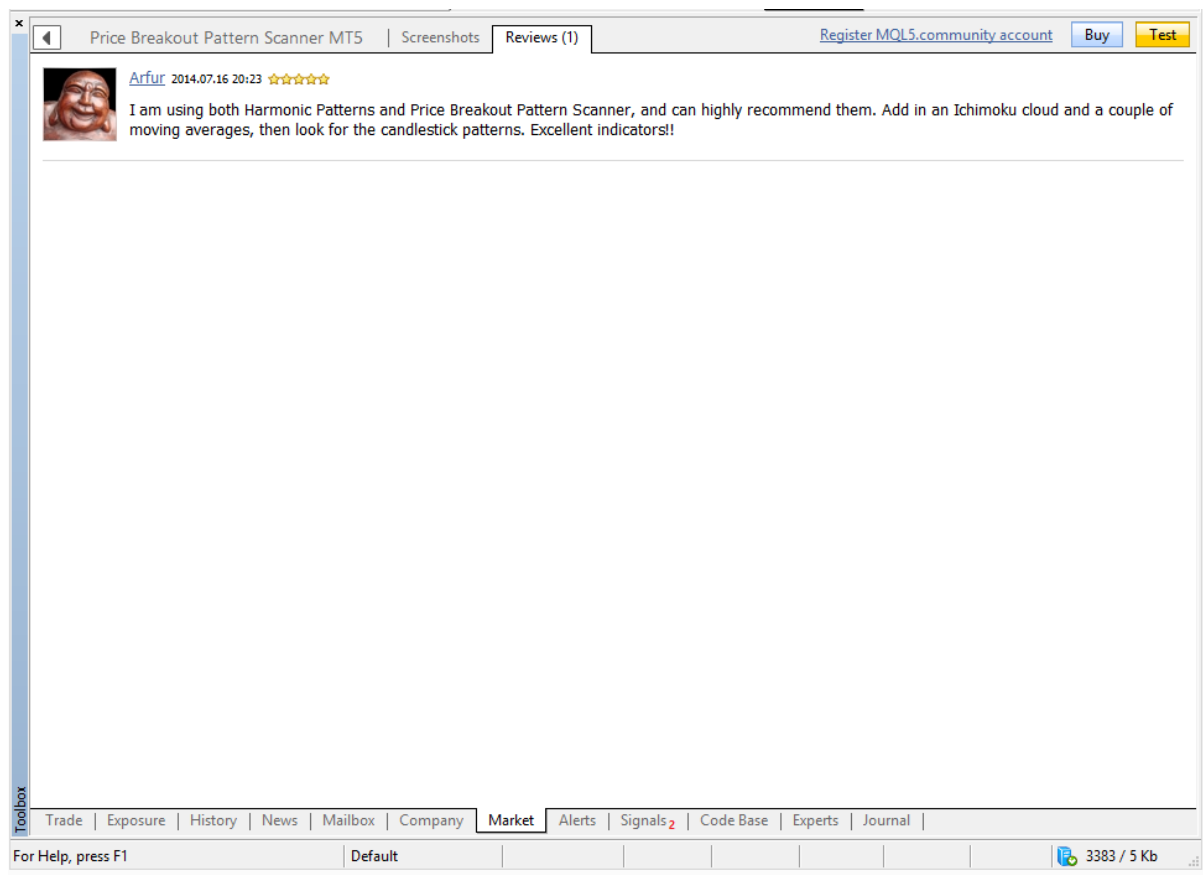

## Variety of choice

When you click the product icon, you will see its own features, description and screenshots. This information is given on the page with the detailed description, there you can choose the required product. In the left column you can find: size of a file, author/editor, publication date, current version, language, number of activations and the product price.

The right part is filled with the product details by seller. Here you can find trading robots algorithms, contents of the latest issues of the magazines, abstracts and extracts from books - all to answer the question "why do you need to buy the product?"

The Screenshots tab on the top of the window will show you how the product works. Charts with the analytical instruments, trading and testing reports can be found in the applications. Pages from the magazines and books help to evaluate their quality and usefulness.

## The process of purchasing

Everything starts with the Activation in the Market. When you buy a product you do not actually get the product itself but the right to use it an unlimited number of times, but on a limited number of computers. This parameter is set for each paid product individually and it is disabled for free products.

After one activation you can use the product on a computer without any restrictions. You will not be able to download the copy of the product on another computer. If you installed the file manually, you will not open it either. Number of activations can be found on the page with a detailed description of the product in the column with its specifications (described above).

### Price Action Candle Detector

Price Action Candle Detector is designed to capture strong reversal price breakout patterns using candlesticks in your chart. The Price Action Candle Detector is yet different from common candlestick pattern indicators found from website and indeed we uses different search algorithm to traditional candlestick pattern scanner. We have found our Price Action Candle Detector has higher success rate in comparison to traditional Candlestick patterns. Our Price Action Candle Detector can scan following reversal and breakout patterns.

- Double Top and Double Bottom Trend Reversal Candle Pattern: reversal indicator
- Bearish and Bullish Triangle Reversal Candle Pattern: reversal indicator
- Bullish Pin Bar and Bearish Pin Bar Candle Pattern: reversal indicator
- Double Inside Bar: Indicator of Potential Breakout in the future, breakout direction can be either bullish or bearish

Price Action Candle Detector uses the pure Price Action to detect patterns. Therefore, there is no parameters to optimize or tune. Our Price Action Candle Detector does not provide you too frequent signals like other candlestick pattern scanners confusing the traders but it just provide you right amount of signals to trade and to read market trend direction.

To simply check how accurate this Price Action Candle Detector is, just load the indicator on your chart and count how many times the patterns were successful in predicting future price direction. In our counting, each pattern provide roughly 60% to 70% success rate when we count the successful patterns if at least we could observe visually clear price change after the pattern occurs. This figure is when you are purely using this Price Action Candle Detector without any secondary technical indicators. You could simply add your favorite technical indicators to increase the success rate even further. You can apply them on any time frame and the accuracy may differ for different time frame.

#### How to use our Price Action Candle Detector

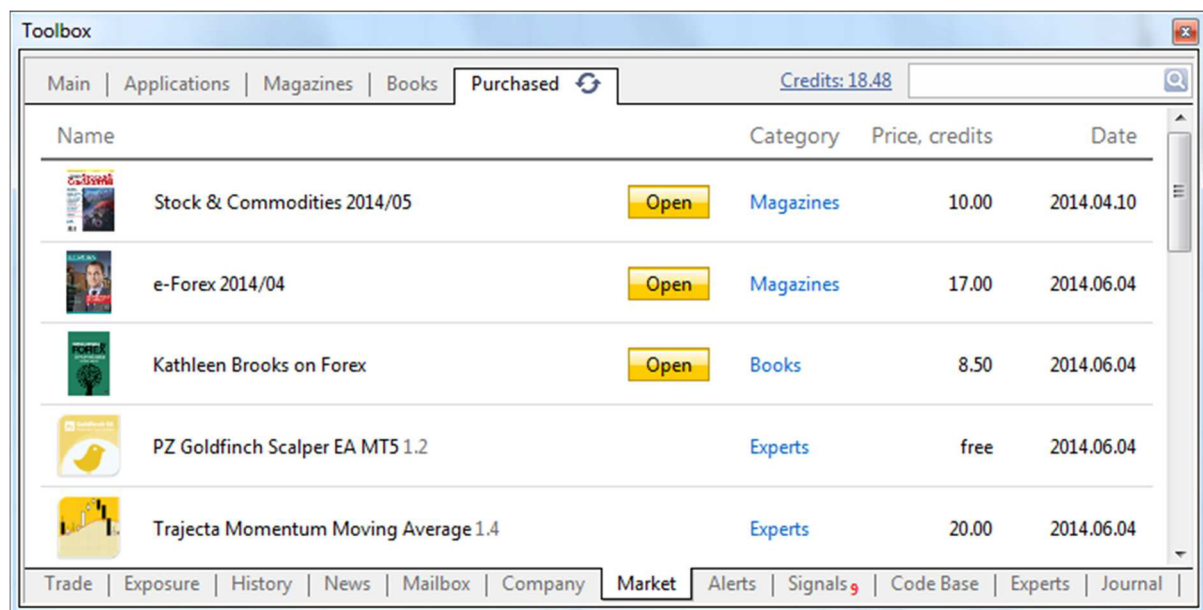

- Recommended time frames are M15, H1, H4 and Daily.
- To get the best results with our Price Action Candle Detector, we recommend to use NRTR (free, <http://www.mql5.com/en/code/145>) together. Use NRTR as the profit target.
- Our indicator does not repaint and only completed pattern will be shown on your chart.
- In addition, the indicator will provide you sound alert and email alert.

For example, you have decided to [Price Action Candle Detector](#), you can activate it 10 times. It means, that you will be able to install it on any of your 10 different computers. You can use it any number of times in your PC or laptop once the indicator is installed.

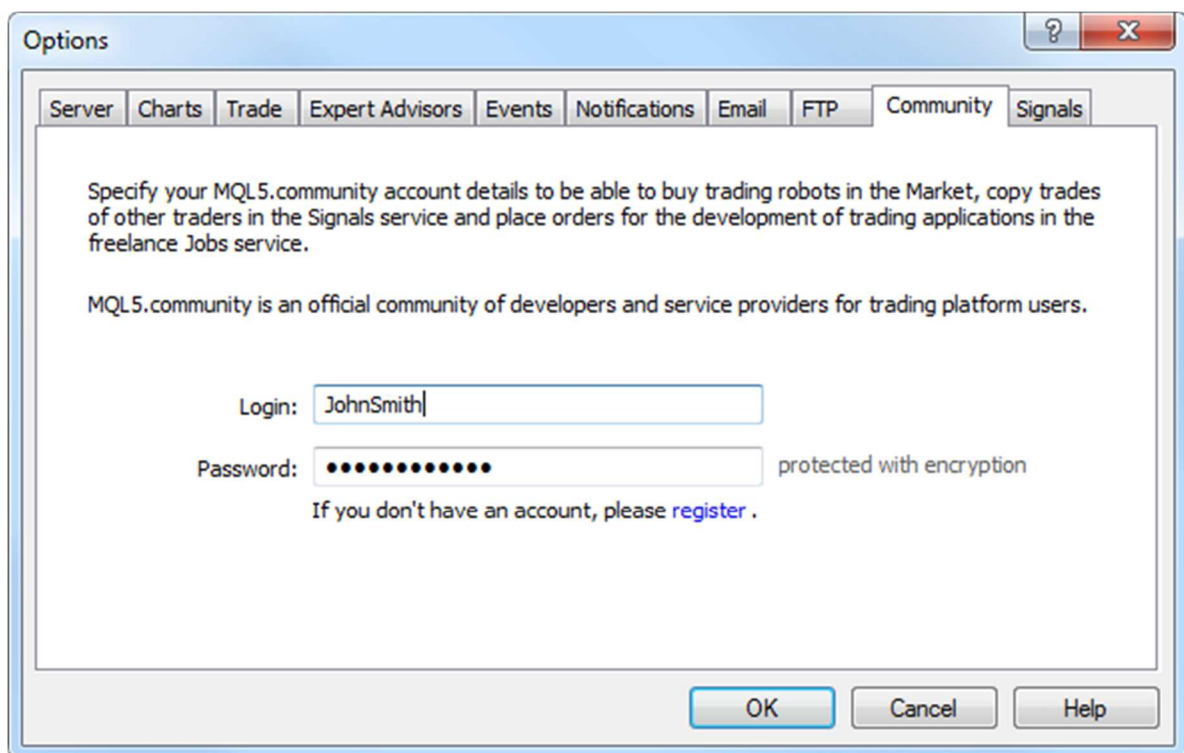

Even if you have lost the file on any of these computers, you can download it free from the MetaTrader Market. Just go to the Market - Purchases. However, if you want to install your Price Action Candle Detector from the 11th computer, you will have to pay. However, what a chance for a person to change his PC for 10 times in his life time?

## How to buy the product?

You have chosen the product and know how everything works. What's next? It's easy, you just need:

- [Account in the MQL5.com](#)
- Add money to your account in any [convenient method](#) (PayPal, Webmoney, Qiwi Wallet, Neteller, credit card or bank transfer)
